# New | Cocoom group notifications in Microsoft Teams

With this new feature, Cocoom allows you to send notifications not only to individual users but also to Teams groups or channels.

Thanks to the Workflows app integrated into Microsoft Teams, you can configure scenarios to automatically broadcast Cocoom alerts in a team channel or group chat.

This integration makes group communication easier and ensures that your key information quickly reaches all relevant people, directly in their usual collaboration space.

To help you with this, you can refer to our documentation, which provides a step-by-step guide on how to set up these group notifications:
